## FPSO MARKET

Page 1 – 20

- FPSO Introduction
- Why an FPSO?
- What Makes FPSOs So Important?
- FPSO Market Presented by Geographical Regions
- Characteristics of the Geographical Areas
- Typical North Sea Weather Conditions (illustrated)
- Typical Field Layouts
- Global Annual Crude Oil Production by Region
- Global Annual Gas Production by Region
- Active and Planned Vessels (FPSOs)
- Deployment of FPSOs
- Supply and Demand Balance (challenges)
- Market Changes
- Specialist FPSO Contractor Market
- New Built versus Conversion – Market Approach (New FPSO by Region)
- FPSO Outlook – Positive

## FPSO DESIGN AND TECHNOLOGY

Page 21 - 96

- Type of Floaters (general)
- FPSO Project Phase
- Factors Influencing FPSO Specification
- Key FPSO Components
- Functional Specification
  - Design Elements
  - Design Concept
  - Design Principles
  - Project Execution
  - HSE Principles
  - Operating Principles
  - Commissioning Principles
  - Field and Reservoir Data
  - Design Life
  - Ship Classification
  - Design and Construction Verification
  - General Arrangement (Drawing)
  - Applicable Safety Critical Elements
  - Ship Motion, Acceleration and Deflections
  - Shuttle Tanker Offloading Limits (Example)
  - Process Data for FPSO Utility Systems (Example)
  - Mechanical Handling

- Start-up and Shutdown Philosophy
- FPSO Interfaces
- Vessel Description
  - ▶ FPSO Particulars
  - ▶ Vessel Layout
  - ▶ Ship Systems
  - ▶ Utility System
- Shipbuilding and Offshore Approach
- Understanding Ship Building and Offshore Approach
- Hull Design
  - Main Particulars
  - General Arrangement and Tank Layout
  - Still Water Loads
  - Minimum Freeboard
  - Weight Control
  - Stability
- FPSO Hull Design Process
  - Adopting Design Process
  - Design Spiral
  - FPSO Simplified Hull Design Procedure
  - Design Optimization
  - Topside Interface Loads related to Motion and Deformation
  - Rule Based Loads
  - Design Impact – Mooring and Topside Interface
  - Materials
  - Hull Loads
  - Topside Interface Loads
  - Stress Buckling and Fatigue
- Hull and Topsides Structural Interfaces
  - Hull Structure Design
  - Construction Considerations
  - Interface Drawing
  - Deformation Effects
  - Deformation Categories
  - Interfaces
  - Support Girder Design
  - Relative Displacement Between PAUs

## VESSEL - TANKER

Page 97 - 110

- Tanker Type Size and Price Comparison
- Vessel Selection
- Vessel Inspection Scheme
- Vessel Repair and Life Extension Requirements Prior to Conversion into FPSO
- Hull Condition Assessment
- Tanker General Arrangement (Drawing)

- Type of Mooring Systems
  - Spread Mooring System
  - Turret Mooring System
    - ▶ Interfaces
    - ▶ Load Transfer for a Turret Mooring System
    - ▶ Turret Bearing
    - ▶ Systems and Arrangements Effecting Turret
    - ▶ Lessons Learned
  - Internal Turret Mooring System and Disconnectable
    - ▶ Internal Passive Turret
    - ▶ Internal Active Turret
  - External Turret Mooring System and Disconnectable
  - CALM (Catenary Anchor Leg Mooring)
  - SALM (Single Leg Anchor Mooring)
  - Historic Developments from CALM and SALM Systems
  - DP (Dynamic Positioning)
  - Tower Mooring
- Turret or Spread Mooring Design
- Mooring System Selection Scheme
- Turret Installation Challenges
- Permanent versus Disconnectable FPSO
- FPSO Turret - Swivel System
  - Swivel and Fluid Transfer System (FTS)
  - Types of Fluid Transfer Systems
  - Swivel Design Philosophy
  - Swivel Specification
  - Swivel Manufacturers
- Riser and Subsea
  - Riser – Interface
  - Coupled Risers
  - Un-Coupled Risers
  - Riser – Turret – Vessel Interfaces
  - Sub-Sea Interface
  - Mooring Line Configuration at the Vessel Interface
  - Challenges

- General Offloading
- Offloading Risks
- Cargo Control System
- Green Line
- Cargo Tanks
- Cargo Pumps and Export Line
- Cargo Valves and Controls
- Cargo Offloading – Bow and Stern Equipment
- Emergency Shutdown and Release

- Cargo Oil Metering Unit
- Metering Application
- Cargo Sampling Unit and Line Flushing
- Tanker Mooring Equipment (Hawser and QR [ quick release])
- Communication – Telemetry

## FPSO TOPSIDE DESIGN & REQUIREMENTS

Page 181 - 238

- Overview
- Availability
- Material Selection
- Structural Design
  - Structural Configuration of Topsides
  - Design Considerations
  - Topsides Design
  - Structural Design
  - Topsides Support Configuration
  - Topsides Layout
- Topsides Process System
  - Concept Selection
  - Preparing the Basic Design of the Separation System
  - Gas/Liquid Separation
  - Crude Processing
  - Gas Handling Systems
  - Gas Processing Requirements
  - Gas Compression
  - Recycle Compression
  - Export Compression
  - Dehydration
  - Produced Water Treatment
  - Water Injection
- Power and Heating
  - Power System
  - Power Requirements
  - Vessel (existing system)
  - Heating Requirements
  - Fuel Gas Requirements
  - Environmental Requirements
  - Operational Issues
  - Heating System
- Utility Systems
  - Utility Systems Available within the Vessel (for Topsides)
    - ▶ Firewater
    - ▶ Seawater and Electro Chlorination
    - ▶ Steam
    - ▶ Open Drains
    - ▶ Compressed Air System
    - ▶ Diesel Supply
    - ▶ Potable Water

- ▶ Aviation Fuel
  - ▶ Overboard Discharges (seawater and produced water after treatment)
- Utility Systems Integrated within the Topsides
  - ▶ Fuel Gas
  - ▶ Heating System/WHR
  - ▶ Closed Cooling Water System
  - ▶ Seawater Filtration and Treatment
  - ▶ Chemical Injection System
  - ▶ Flare
  - ▶ Nitrogen
  - ▶ Closed Drains
  - ▶ Freshwater for Crude Desalination
  - ▶ Process Cooling Water
- Utility System Available within the Vessel and Integrated within the Topsides
  - ▶ HVAC
- Centralized System and Control Philosophy
  - De-centralized
  - Centralized and Distributed
  - Recommendation
- Control and Safety System
  - PCS – Process Control System
  - PSD – Process Shutdown System
  - F&G – Fire and Gas System
  - ESD – Emergency Shutdown System
  - Subsea Control System
  - Production Hydraulic Power System
- Other Design Requirements
  - Electrical Design
  - Instrumentation Design
  - Telecommunication
  - Mechanical Design
  - Piping Design
  - Heat Tracing and Insulation
  - Corrosion Monitoring (Topsides equipment and piping)
- Topsides Installation Challenges
- Successful Topside Design
- Corrosion Protection
  - Hull
  - FPSO Cathodic Protection Design Challenges

## CONSTRUCTION/COMPLETION, PRE-COMMISSIONING AND COMMISSIONING

Page 239 - 256

- General
- Commissioning Guiding Principals
- Commissioning Phases – Timeframe
- MC – Mechanical Completion
- Pre-Commissioning
- Commissioning
- Completions Flowchart
- Completions Certificate Flow
- Post Commissioning
- Summary of Completion Activities and Milestones

## RULES AND REGULATIONS, CODES AND STANDARDS

Page 257 - 274

- General
- Classification and Regulations
- Statutory Regulations (Coastal State Requirements)
- Flag State Requirements
- Flagging
- National and International Rules and Regulations, Codes and Standards
- List of Selected Industry Standards

## LESSONS LEARNED

Page 275 - 280

- Key Factors
- Commercial
- Safe Execution

## TERMS AND ABBREVIATIONS

Page 281 - 286

## SOURCES OF INFORMATION

Page 287 - 289

## ABOUT THE AUTHOR

Bruno Ban Msc O.M.M.E

Bruno Ban is an Electrical Engineer (MSc) and Maritime Transport Engineer (BSc) who has over 35 years of experience in the maritime, offshore oil & gas industry. His wealth of knowledge and experience, ranging from service engineering, trouble shooting and operations to commissioning, construction and project management, has contributed to many successful projects worldwide. Past projects include a wide range of installations (mobile, fixed and subsea), such as FPSOs, DP (Dynamic Positioning) vessels, petrochemical plants, pipe layers and subsea interfaces.

Bruno worked for major offshore O&G companies until 2000, when he set up his own company BBOMC Ltd., continuing to provide technical and management support, training, and consulting to the industry.

In recent years Bruno has committed himself to the Floating Production Industry, studying and analyzing the industry's behavior, technical requirements, developments and progress. This book is the product of the author's vast experience and is an invaluable resource for understanding the technical value and complexity of FPSOs and such installations.
